

# INTERFLUX<sup>®</sup> IF 8001

## IF FLUXPEN

*Lead free  
Compatible*

**IF 8001** is a flux especially developed for handsoldering. It withstands the high temperatures of soldering irons. It doesn't spread like a wavesoldering flux and leaves minimal residues. The flux can be easily applied with the IF Fluxpen . The glassfibre tip allows precise and selective application of the **IF 8001**. The IF Fluxpen is refillable. **IF 8001** is ideal for soldering and desoldering of SMD components and perfectly suitable in combination with the 'mini-wave' soldertip. **IF8001 is lead free compatible.**
